

Quiz Problem 10

$$\hat{f}(x) = \frac{1}{B} \sum_{b=1}^B \hat{f}_b(x)$$

We can think of $\hat{f}(x)$ as the mean of $\hat{f}_b(x)$ so

$$\text{Var}(f(x)) = \text{Var}\left(\frac{1}{N} \sum_{b=1}^B \hat{f}_b(x)\right) = \frac{1}{N^2} \text{Var}\left(\sum \hat{f}_b(x)\right)$$

$$= \frac{1}{N^2} \left[\underbrace{\sum_n \text{Var}(\hat{f}_b(x))}_{N \sigma^2} + \underbrace{\sum_{b \neq b_i} \text{Cov}(f_{b_i}, f_{b_j})}_{N(N-1) p \sigma^2} \right]$$

$$= \frac{1}{N^2} \left[N \sigma^2 + N(N-1) p \sigma^2 \right]$$

$$= \boxed{\frac{\sigma^2}{N} + \frac{(N-1)}{N} p \sigma^2}$$

$$\frac{\sigma^2}{N} + \frac{(N-1)}{N} p \sigma^2 > 0$$

$$1 + (N-1)p > 0$$

$$\boxed{p > -\frac{1}{N-1}}$$

$$p > \frac{1}{1-N}$$

could never
be -1
since $N=0$ if
it did
(which makes
no sense)
